## **DETAILED ACTION**

### ***Specification***

1. The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 2-5, 8, 9 and 13 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 2-5, 8 and 9 are rejected because the language "obtainable by" is indefinite. The language does not set forth a positive limitation. It is suggested that Applicant amend the claims to read --obtained by --.

Claim 2 is rejected because the language "having a linear chain and being unsaturated, and the balance being unsaturated" is not understood.

4. Regarding claim 13, the phrase "such as" renders the claim indefinite because it is unclear whether the limitations following the phrase are part of the claimed invention. See MPEP § 2173.05(d).

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Krull (S 6,610,111).

Krull teaches a low-temperature stabilized additive for fuel oils having a sulfur content of up to 0.05% (500 ppm) comprising A1) 1-99% by weight of at least one saturated monocarboxylic acid having 6-50 carbon atoms and A2) from 1-99% by weight of at least one unsaturated monocarboxylic acid having from 6 to 50 carbon atoms (see abstracts). Constituent A2) may contain one or more double bonds and the proportions of A1) is less than 10% (see col. 3, lines 40-48). The fuel additive can be combined with antioxidants or conductivity improvers (see col. 17, lines 7-15). The additives are added to the fuel in a solvent/carrier solution (see col. 15, lines 6-14). The fuel may be a middle distillate or jet fuel (see col. 16, lines 54-61).

Krull teaches the limitations of the claims other than that he does not specifically teach a composition wherein a plurality of monocarboxylic acids are present. However, it would have been obvious to one of ordinary skill in the art to use a plurality of the acids because Krull teaches that at least one acid is used and the language "at least one" suggests that a plurality may be present in the composition.
